Subject: FW: Neuhauser - question on trash

Joyce,

What do you think about this:

- a) make sure trash encountered in excavations is promptly re-covered with non-hazardous soil (i.e., in-situ soil that does not required removal per the DRWP) to prevent wind-blowing; or, if necessary,
- b) placement of trash that is inadvertently or unavoidably excavated as part of the drum removal process into soil staging areas, if heavy, or if just trash, into lined 55-gallon open top drums in the storage area, and then placement of the liners in roll off boxes for offsite disposal.

Dave

Subject: Neuhauser - question on trash

Dear Dave and Tom – One thing we have not discussed is dealing with any trash that is exposed during the excavations. I have not yet asked CDPHE about this subject. I know there was an incident nearby in 2014 when an oil company installed a pipeline through some trash, but I don't know all the facts.

Let me know your thoughts. Thanks!
